Coaxial Inserts

- Switch between three unique sample ratios during external referencing experiments.
- Ideal for variable temperature experiments as materials is the same between the tubes and spacer.
- In the complete set the insert and outer tube are fused together at the bottom. It is recommended for high field experiments under 600 MHz.
- For ultra high field experiments over 600 MHz; order an inner tube, two spacers and a Precision Thin Walled tube rated for over 600 separately.

Complete sets come with inner and outer tubes, spacer and cap w/hole.
